YEAR CODE BOX

THESE speedometers are attached to the handle bar, and are driven by flexible shaft and gears, as shown above, in the same manner as the Jones Speedometers for automobile use. Quick and easy of attachment.

JONES SPEEDOMETER

THE LATEST DEVELOPMENT
IN MOTORCYCLE AND
BICYCLE SPEED-INDICATORS

These instruments contain ALL the features and refinements found in our speed-indicators for automobile use.

The Jones has a world-wide reputation for ACCURACY and RELIABILITY. The Motorcycle and Bicycle Police in all the larger cities in Europe and America use the Jones.

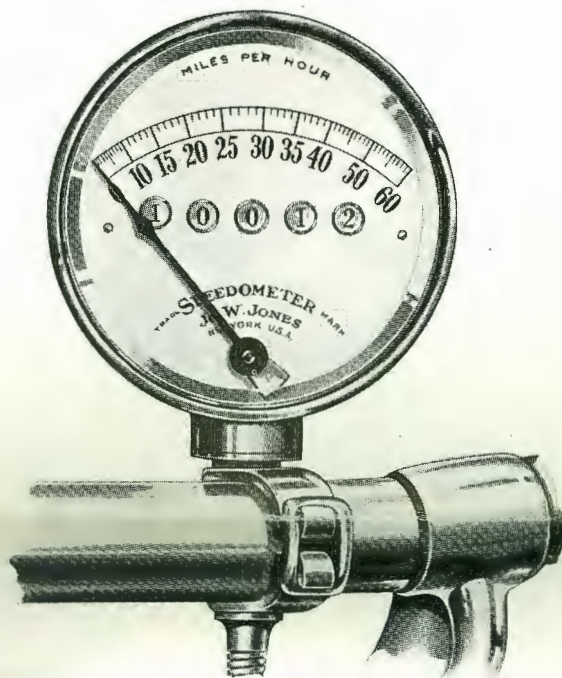

The Jones is attached to the HANDLE BAR directly IN FRONT of the rider.

Substantial brackets that will hold. Positive and immediate indication of every change in speed. Season and Trip Odometer WITH INSTANTANEOUS RESET—invaluable when touring. Indicating hand WILL NOT “run over” speed scale on dial. ABSOLUTELY STEADY. Proper fittings for ALL STANDARD machines.

Maximum Speed Hand embodied in our Model No. 32 contrasts with black variable Speed Hand, is carried forward by the latter, but stops automatically at highest speed attained, SHOWING THAT SPEED as a permanent record until released by the resetting stem. When released it immediately returns to the speed at which the machine is at that moment traveling, remains there, even after the machine is stopped. Gives absolute, indisputable evidence of the speed of the machine at the moment of resetting.
